

OVERVIEW

The Alaska Department of Transportation and Public Facilities (DOT&PF), Central Region, is conducting a Planning and Environmental Linkages (PEL) Study to consider potential transportation improvements in Anchorage (see Figure 1 below), with the intent to improve:

The PEL Study process gives DOT&PF an opportunity to engage the community and stakeholders in identifying transportation needs, developing potential solutions, and narrowing down the list of alternatives that are slated to be carried into future environmental review and design processes.

SCHEDULE

The PEL Study process began in June 2021 and is expected to be completed in 2025 (see Figure 2). Dates are subject to change. A detailed schedule may be viewed at sewardglennconnection.com.

We researched the project area and engaged the public to gain an understanding of current and future transportation needs. This helped in the development of a purpose and need statement for the PEL Study, which, combined with public input, is helping guide the development of project alternatives.

Preliminary alternatives were offered for a 60-day public comment from February 7, 2024, through April 7, 2024. The project team has reviewed public comments and refined alternatives, incorporating key elements from the comment period.

The team has additionally conducted traffic modeling and gathered other data, both of which affect the refined alternative designs. Next steps include collecting public comments on the refined alternatives. This feedback will guide the team to a recommended alternative and draft PEL Study document, which will be made available for public comment prior to delivering a final PEL Study document.
